

Umbilical Stand

Umbilical Stand

A tidy deck is a safer deck. Ensuing that an umbilical is stored correctly preserves the life of the umbilical and it makes work easier and more efficient, especially where space is at a premium.

The Safe Air Diving umbilical stand is a perfect solution allowing for neat and tidy umbilical storage with a built in bailout cylinder holder and a hat hanger rail that is compatible with our KM97 hat light bracket.

The standby diver, or the diver dressing-in is provided with a seat with all of their equipment close at hand, ready at a moments notice.

The system keeps your key diving equipment in a safe and accessible manner, protecting your divers, protecting your investments.

Designed and made by Safe Air Diving—Denmark
